Oak Cooper

Senior Fullstack Engineer | Node · NestJS · Vue · TypeScript | Remote
oak@oakcooper.com · (360) 545-3447 · linkedin.com/in/oakcooper · oakcooper.com

Summary

Fullstack engineer with 25 years of production experience, from .NET backends to Angular and Vue frontends. Spent four-plus years on a ~300-component Vue app and the NestJS/GraphQL microservices behind it — building features across the stack, co-leading its Vue 3 migration, and rebuilding the deployment and observability infrastructure underneath it. Along the way I set the team's approach to AI-assisted engineering — driving Claude Code adoption and building LLM review into the pipeline — plus the judgment to know when to lean on it and when to override it.

Experience

ACV Auctions — ACV MAX

Senior Software Engineer · Remote · Feb 2022 – Jul 2026

- **Contributed to the NestJS microservice layer** behind a Vue/GraphQL platform — built fullstack features across the UI, GraphQL, and domain services backed by SQL Server, Postgres, MongoDB, and third-party APIs.
- **Helped move data-access logic out of GraphQL resolvers** into dedicated domain microservices, starting with database-specific services and moving to domain-focused ones.
- **Authored an ADR standardizing error handling and logging** across NestJS, C#, Python, and Go services, adopted by multiple teams.
- **Co-led the Vue 2 → Vue 3 / Vuetify 3** migration of a ~300-component application — cleared the Vuetify breakages that were the biggest blocker and moved state from a hand-rolled GraphQL client to Pinia.
- **Engineered the guardrails that keep AI-generated code trustworthy** — codified the conventions Claude Code follows, so its speed never costs the team quality or consistency.
- **Migrated the frontend deployment pipeline** off Vercel and GitHub Actions onto AWS and Jenkins, rebuilding branch previews from scratch — saving ~$80K/yr.
- **Built frontend browser observability from scratch, twice** — New Relic, then Datadog RUM — adding anomaly detection to catch silent failures that threshold alerts miss.
- **Cut local test-suite runtime in half and memory use by 66%** — then encoded the fixes into an automated pre-PR review step.
- **Ran coding and systems-design interviews** as the team scaled across the US and India.

Hudson MX

Lead Frontend Developer · Remote · Feb 2020 – Feb 2022

- Led a small frontend team owning six Angular apps and one React app for an ad-tech platform.
- Introduced an Nx monorepo with a microfrontend architecture, and managed a private npm registry of shared UI components consumed by 30+ apps and microfrontends across the company.
- Established a UI design system on Storybook in partnership with the UX team.

Dick's Sporting Goods (Blue Sombrero)

Lead Developer · Atlanta, GA · Aug 2017 – Sept 2019

- Led the frontend architectural redesign of the flagship registration product (web + mobile) in TypeScript/Angular — devised a microfrontend strategy using Angular Elements and maintained a shared component library used across product lines.
- Built RESTful backend services and controllers in ASP.NET MVC, using C# and Entity Framework against SQL Server — roughly 30% of the role's scope alongside the frontend architecture work.
- Introduced Jest and Cypress for unit/integration/e2e testing; established mandatory PR and pre-merge build/lint/test checks.

Earlier Experience (2001 – 2020)

- **Preparis, Inc.** — Sr. Software Engineer (Apr 2016 – Aug 2017): led the frontend redesign of the flagship portal (AngularJS*)* and built a hybrid mobile app (Ionic).
- **Morneau Shepell** — Sr. Software Engineer / Technical Lead (2013–2016): tech lead for 14 developers on a healthcare SaaS platform (ASP.NET, AngularJS).
- **Prior roles (2001–2013):** Sr. Systems Engineer at Kabbage (WCF→REST migration, first native Android app); consultant at HotDocs; co-founder/developer at Centrafuse; Software Engineer II at FNC.

Skills

Frontend: Vue 2/3, Vuetify, Angular, React (Next.js), TypeScript, Pinia, NgRx (Redux), GraphQL

Backend: Node.js, .NET/C#, Express, NestJS, GraphQL, REST

Databases: PostgreSQL, SQL Server, MongoDB, Firestore

Build & CI/CD: Jenkins, Docker, Kubernetes (Helm), Vite, GitHub Actions, AWS (S3, CloudFront, Lambda)

Observability: Datadog (RUM, monitors, sourcemaps), New Relic

AI-assisted engineering: Claude Code, custom skill/plugin development, AI-forward workflows

Testing: Vitest, Jest, Cypress, Storybook, Chromatic

Personal Projects

Job Funnel: Built a job-search tracker that uses a Claude Haiku model to classify incoming email. It records an event only when confidence is high and the employer is clearly named, and sends everything else to a review queue. Node, TypeScript, SQLite, Next.js. Private repo; happy to walk through it.

Postmarked: Built a postcard-tracking PWA that my household uses every day. Vue 3, Pinia, and Firebase (Auth with Google sign-in limited to an allowlist, Firestore, Storage), with separate staging and production Firebase projects and encrypted Firestore backups. Private repo; happy to walk through it.

Education

Bachelor of Business Administration, Management Information Systems
University of Mississippi
